

**Product Name:**  
**Decowood**  
**Decorative Imaging Finish**

**Release Date:**  
**Friday 10th December 2010**

Timber looks beautiful around the home and adds natural warmth to any room. However, the reality is that there are many factors working against using timber in buildings, causing it to age prematurely and become expensive for the home owner. Exposure to sunlight fades the colour of the wood grain, regular staining becomes costly and time-consuming, and splitting and rotting are inevitable.

DecoWood™ provides a durable alternative to timber that can be used in many applications such as windows, doors, louvres, slats, screens, shutters and outdoor furniture. DecoWood™ boasts the low maintenance and high durability qualities of aluminium, in addition to the natural beauty and warm textured feel of timber.

DecoWood™ is ideal for coastal properties and bushfire prone areas, and comes with a ten year limited warranty. You can also enjoy the peace of mind that DecoWood™ is a sustainable product that reduces logging and carbon emissions.

## DESIGN FEATURES

- Use DecoWood™ to achieve the popular look of timber windows and doors in residential or commercial projects without ever having to paint or stain, for a finish that will look as new for years to come despite the elements.
- DecoWood™ has been tested extensively for its performance against high solar radiation, salt spray and pollution in two of the world's toughest locations – Venice, Italy and Miami, Florida – with results that comply with all Australian Standards.
- Decorative imaging finishes carry Qualicoat certification and have passed extreme exposure testing.
- A full 10 year warranty is offered in accordance of Australian Standard AS3715.
- The finish is a special marine grade polyurethane powder coating, which is more durable than standard polyester powder coatings.
